1st Semester

GEOGRAPHY

PAPER—C1T

GEOTECTONICS AND GEOMORPHOLOGY

Full Marks: 60

Time: 3 Hours

The figures in the right-hand margin indicate full marks.

Candidates are required to give their answers in their own words as far as practicable.

Group - A

Answer any four questions.

4×12

- **1.** Distinguish between the concepts of Airy and Pratt regarding Isostasy.
- 2. Briefly describe different types of faults with suitable sketches.
- **3.** Explain the mechanism of formation of folded mountain along convergent plate boundary.

- **4.** Briefly describe different processes of mechanical weathering.
- **5.** Explian the mechanism of evolution of landforms on uniclinal structure.
- **6.** Make a comparative study between the concepts of evolution of landforms as proposed by Davis and Penck.
- 7. Elucidate the erosional landforms developed in coastal region. 12
- **8.** Discuss different types of landforms developed due to aeolian deposition.

Group - B

Answer any six questions.

6×2

- 9. Distinguish Era from Epoch.
- 10. Define inverted topography.
- **11.** What is tripple junction? Give example.
- **12.** Define hanging valley.
- 13. Distinguish between Yardang and Zeugen.
- 14. Define Weinert precipitation Ration.
- 15. Distinguish between solifluction and mudflow.
- **16.** What is cordillera type of mountain?
- **17.** What is entropy maximization?
- 18. Differentiate bergschrund from crevasses.
